Juan Cruz Mare

Backend Developer | Python, Django, SQL, REST APIs | AI QA & Automation

Córdoba y alrededores, Argentina

Extracto

I'm a Python Backend Developer with experience working on backend systems using Python, Django, SQL and REST APIs. I've contributed to platforms in healthcare, insurance, guest registration and data processing, helping build backend features, improve internal workflows and support applications used in real environments. I also have experience in quality assurance for generative AI models, where I review model outputs, identify inconsistencies and help improve AI-related processes through structured evaluation. I enjoy solving technical problems, learning new technologies and building practical solutions that make systems more reliable and efficient. I'm especially interested in backend development, API design, automation and data-driven projects. Main technologies: Python, Django, Django REST Framework, SQL, REST APIs, RabbitMQ, Git and automation.

Experiencia

Scale AI

AI Python Scripting & QA Specialist

marzo de 2024 - Present (2 años 4 meses)

Estados Unidos

- Evaluated and validated generative AI model outputs according to structured quality criteria.
- Identified inconsistencies, edge cases and errors in AI-generated responses.
- Contributed to improving response quality, accuracy and reliability through detailed QA processes.
- Collaborated with technical workflows focused on AI model evaluation and process optimization.

NTB Solutions S.A.

Backend Developer

septiembre de 2021 - marzo de 2024 (2 años 7 meses)

Буэнос-Айрес

- Developed and maintained backend systems for healthcare and insurance management platforms.
- Built and integrated REST APIs using Python, Django and Django REST Framework.
- Worked with SQL databases to support internal business operations and data workflows.
- Improved backend logic, system performance and internal process efficiency.
- Supported production-level applications by resolving issues and maintaining system reliability.

Chekin

Backend Developer

febrero de 2022 - octubre de 2022 (9 meses)

Sevilla

- Developed backend features for automated guest registration and compliance workflows.
- Built backend services using Python, Django and API integrations.
- Integrated asynchronous messaging workflows using RabbitMQ.
- Contributed to automation processes that improved operational efficiency and registration flows.
